Laser Grinder[®] Upgrades Warehouse Floor For VNA Operation

Concrete Grinding Ltd has successfully used its LASER GRINDER[®] system to upgrade a warehouse floor to TR34 Category 1 specification and allow a wire-guided fork lift truck to operate in new VNA racking.

The work was carried out at the North Wales premises of Hawarden Sheetters Co Ltd, paper and board converters, as part of a re-organisation of its storage arrangements, including using part of the warehouse to store finished product on pallet racking served by a VNA truck from BT Rolatruc.

Altogether, 12 bays of racking 30 metres long and 8.6 metres high were installed. Concrete Grinding was required to grind three tracks in each aisle in order to ensure the three-wheel truck could operate safely and efficiently, with one aisle being completed a day as the racking was installed.

Concrete Grinding also provided removable concrete cappings for any manholes in the aisles and repaired any joints that the VNA truck would pass over.
